

Getting Photos from Cellphones

Because the photo must be resized and renamed, it is easiest to transfer the photo to a PC or Mac for the resizing and renaming. Follow these steps to transfer the best version of your photo:

- iPhone: View the photo you would like to send and click on it. Push the "send" button on the lower left menu (box with up-arrow). The screen will say "1 Photo Selected"; click on "Options just below this. Select "Individual Photo" and click "Done". At the bottom of the screen, click on "Mail". After filling in yourself as the recipient and a subject of the email, click the send up-arrow, and select "Actual Size".
- Android: The mail apps default to using the actual size of the photo when using the paperclip to attach the photo. Attaching gives better results than embedding the photo in the body of the email. Open the mail app, put yourself as the recipient, and click the paperclip icon to attach the photo. Hit send.

Open your email program on your PC or Mac and download your attached photos.

Follow the PC or Mac instructions for resizing and renaming your photo.
